

HYDRA GRABBER

SQUARE BALE HANDLER

Safe, Effective Square
Bale Handling

Loading & transporting large square bales becomes safe and efficient with the **HYDRA GRABBER™** loader attachment. The simple but effective design of this machine engages bales from any side. By eliminating the need to “spear” bales, the **HYDRA GRABBER™** prevents the damage to buildings, trucks and trailers that can result from pushing into stacks. Hydraulic power provides rapid engagement and retraction of the aggressive bale hooks. With the hooks retracted, the operator simply places the machine in contact with the selected bale face. Stack push-over is no longer a concern, as the bale hooks move from fully retracted to fully embedded in the bale only after the loader is no longer in motion. Stacking on trucks, trailers or in barn becomes fast and simple. After bales are in position, the hooks are hydraulically retracted, releasing the bales. The dangerous problem of pulling the stack back on the loader is prevented, improving safety and efficiency. When equipped with the **HYDRA GRABBER™**, most tractor loaders become capable of loading and unloading trucks and trailers from one side, resulting in significant time savings.

SPECIFICATIONS:

- **Bale Sizes Handled:**
 - Two square bales 4' x 4' x 8' (2,000#)
 - Two square bales 3 x 4' x 8' (1,500#)
 - Two square bales 3' x 3 x 8' (1,000#)
 - One round bale up to 2,500# with optional spear
- **Hydraulic Requirements:**
 - Minimum Pressure: 1,700 PSI
 - Minimum Flow: 3 GPM
 - Hook actuation requires (1) hydraulic circuit
- **Ten Adjustable, Forged Bale Engaging Hooks**
 - Additional hooks may be added for loose or slick bales
- **Loader Attachment System**
 - Bob-Tach™ style standard
 - Adapters available for major loader brands
- **Weight:** 460#
- **Dimensions**
 - Width: 78"
 - Height: 56"
 - Forward extension: 14"
